

# CSP RAG: Ongoing research

# Current MPI research

Protected species capture estimation

Abundance and distribution of WCSI Hector's dolphins

Reanalysis of Hector's dolphin line transect aerial survey data

Marine mammal risk assessment

Global seabird risk assessment (for New Zealand species)

Repeat quantitative modelling of southern Buller's albatross

Quantitative modelling for Antipodes albatross

Focussed spatially explicit risk assessment for black petrels

Cryptic mortality of seabirds (in conjunction with CSP)

# CSP multi-year projects

**INT 2013-02 Identification of seabirds captured in New Zealand fisheries**

**INT2013-03 Identification of marine mammals, turtles and protected fish captured in New Zealand fisheries**

**INT2013-05 Assessment of cryptic seabird mortality on trawl warps and longlines**

# CSP projects forming part of long-term research

POP2013-01 New Zealand sea lion population project  
(Auckland Islands)

POP2013-02 White-capped albatross population estimate  
(Auckland Islands)

POP2013-03 Gibson's albatross population study  
(Auckland Islands)

POP2013-04 Black petrel population project

MIT2012-05 Protected species bycatch newsletter

# Other long-term annual research

Buller's albatross population study (The Snare's)

New Zealand fur seal population study (WCSI)

New Zealand sea lion (Otago)
