

Set net - Protected Species Risk Management Plan

FV	Vessel ID	Home Port
Owner	Skipper/s	Date
Vessel photo	Mitigation photo	Mitigation photo

Purpose of this RMP

This PSRMP documents agreed procedures and actions that skippers of this vessel will follow to reduce risk of protected species captures and includes implementation of best practice as outlined by the Mitigation Standards. **This document is to be prominently displayed onboard.** Skipper(s) and crew must also read and understand the supporting 10 Golden Rules & Operational Procedures.

Regulated measures for protected species reporting

All protected species captures should be reported using the electronic NFPS Catch Report.

Remember it is not illegal to catch a protected species however it is illegal not to report it!

This vessel's measures used to manage the risk of non-fish protected species capture:

Vessel Practices	
1. Fish waste management	- No discharge immediately before or during setting. - While hauling, fish waste is held or batch discharged (minimum of x min intervals) opposite side to the hauling station. All used bait is retained till after haul. <i>- Describe suitable equipment and setup- including storage methods and location of discharge</i> <i>- Describe methods to contain fish waste (e.g. check open scuppers near processing point) and any contingency plans</i>
2. Placement	Spatial placement of set nets does not pose unnecessary risk to seabirds (i.e. near seabird colonies and foraging grounds)
3. Net interaction	Haul as quickly as practicable to minimise time net is at/near surface Nets are not stalled
Stickers	All practicable stickers are removed from the net before each shot.
Gear maintenance/repair	Is conducted while net is onboard or during low risk periods (i.e. night or low seabird abundance) Regularly inspect and maintain all fishing gear/equipment (e.g. winches)
4. Deck landing/impact	Reduce unnecessary deck lighting
Training	Crew know and follow safe seabird-handling procedures and protocols
Other	<i>Any other gear/mitigation? (otherwise omit)</i>

Contact your Liaison Officer when a TRIGGER POINT is reached.

Any 24 hr period

(Alive or Dead) Any great albatross, penguin, dolphin, sea lion or basking shark

(Alive or Dead) First turtle of the fishing year (Oct- Sept)

(Alive or Dead) 3 large (e.g. albatross/mollymawk, giant petrel, gannet), or 5 small (e.g. petrel/shearwater) seabirds, or 2 fur seals

(Dead) Any black petrel or flesh-footed shearwater

Any 7-day period

(Alive or Dead) 10 protected seabirds of any type, or 3 turtles, or 5 fur seals

Contact:	Ph:	Email:
-----------------	------------	---------------

Information in this plan will be provided to MPI and FINZ for reporting and management purposes

TEN GOLDEN RULES

FOR SETNET FISHING TO SAVE PROTECTED SPECIES

- 1. Ensure your vessel has onboard the current Coastal Setnet Operational Procedures (OPs), a Protected Species Risk Management Plan (PSRMP), a map of setnet prohibition areas** and that you and your crew are familiar with the regulations and reporting requirements.
- 2. Avoid setting nets in the vicinity of significant seabird colonies and foraging areas** (consider time and season) for the region you fish, and where seabird and/or marine mammal activity is particularly high.
- 3. Ensure that stalling does not occur** while the nets are set (i.e. minimise the time the net sits at the surface).
- 4. Avoid excessive soak time** (only soak as long as needed to maximise catch value) and ensure you are aware of maximum soak time outlined in the regulations.
- 5. Ensure your setnets do not cover more than one quarter of a channel, bay, inlet, etc,** as required by the regulations.
- 6. No discharging of offal or fish waste immediately before or during setting** and remove all stickers as practicable from the net prior to each shot.
- 7. While hauling, either hold or batch discharge offal and fish waste.** Return live fish (meeting the legal requirements) to the sea as quickly as practicably possible.
- 8. While ensuring safe operating standards, minimise additional and unnecessary lighting** so as not to attract or disorientate seabirds, especially while sheltering or at anchor.
- 9. Ensure you and your crew are familiar with and follow safe animal handling procedures and protocol** (see DOC Handling and Release Guide). Record and report any bird band numbers to bandingoffice@doc.govt.nz.
- 10. Report all protected species captures by ERS and notify your local Liaison Officer (same day) when protected species captures reach a Trigger point.** The Trigger points are outlined in your PSRMP. Assess the event and when necessary implement further risk reduction.

For support phone your local Liaison Officer

Ben Leslie – 021 025 15379

TEN GOLDEN RULES

NON-FISH OR PROTECTED FISH SPECIES (NFPS) CATCH REPORTS

- 1.** The Fisheries (Reporting) Regulations 2017 require reporting of **all** NFPS captures (dead or alive). It is an offence to fail to report.
- 2.** All permit holders and skippers must know the law and be able to file an NFPS catch report using their vessel's Electronic Reporting system.
- 3.** Fisheries New Zealand observers file their own NFPS catch reports, but this does NOT mean the vessel's obligation to report has been removed.
- 4.** *Captures* means that the NFPS has become fixed, entangled, or trapped in such a way that it cannot move freely or free itself from any part of the fishing gear. (includes for example tori lines and paravanes)
- 5.** *Deck strikes* means seabirds injured or dead from colliding with the vessel, or any that need crew assistance to leave the vessel because they are disoriented.
- 6.** Treat all animals with respect and care (dead or alive).
- 7.** Return all NFPS to the sea promptly and carefully unless required to be kept on board by a Fisheries New Zealand observer.
- 8.** Unauthorised retention or any further interference with protected species is an offence under the Wildlife Act 1953.
- 9.** If unsure of the species name (NFPS code) use the generic codes provided.
- 10.** E-logbook Users Instructions and Codes can be found here:
<https://www.fisheries.govt.nz/dmsdocument/37982-Fisheries-E-logbook-Users-Instructions-and-Codes-Circular-2019>

Non-Fish or Protected Fish Species Catch Report - Summary Information

(from Fisheries New Zealand Electronic Catch and Position Reporting Guide July 2019)

You must complete an NFPS Catch Report if there is an interaction with the following by the vessel or gear during a trip:

- Birds;
- Marine mammals (e.g. New Zealand fur seal);
- Marine reptiles (e.g. turtles);
- Protect fish species (e.g. basking shark, great white shark, manta ray, black spotted grouper);
- Selected benthic organisms (corals, sponges, and bryozoans).

You will be prompted for more information about how the capture happened if a seabird is taken during trawling or surface or bottom longlining.

You must take care when choosing codes where there is a group option and a specific option so that you do not accidentally report an organism twice.

If there is more than one NFPS capture during an event, they will all be recorded on the same NFPS Catch Report.

The NFPS Report must be completed and provided at the same time as the Fish Catch Report, if it occurs as part of a fish catch event.

If the capture happens while you were not actually fishing (e.g. while steaming), the NFPS Catch Report will be a standalone report, i.e. it will not be linked to a Fish Catch Report and must be completed and provided to FishServe before the end of the day on which you became aware of the capture.

Online resources to assist you with NFPS identification

- The DOC website has material on coastal and deep water seabird species. Guides include MPI reporting codes and are available in multiple languages: doc.govt.nz/our-work/conservation-services-programme/csp-resources-for-fishers/a-fishers-guide-to-new-zealand-seabirds/
- A fuller set of invertebrate NFPS material is available at: fs.fish.govt.nz/Doc/23020/AEBR_86.pdf.ashx
- A coral guide is available at doc.govt.nz/Documents/conservation/marine-and-coastal/fishing/coral-id-guide-updated.pdf

North Island Coastal Setnet

Operational Procedures - Protected Species Risk Management

Version 3 December 2021

FISHERIES
INSHORE NEW ZEALAND

Contents

1. Background, Rationale and Purpose	3
2. Main species at risk.....	4
3. Managing the main risks associated with the coastal setnet fishery	6
4. Mandatory setnet measures	7
5. Risk Management Plan Responsibilities.....	8
6. Reporting Protected Species Captures - Trigger Limits.....	9
7. Audit & Review	9
8. Fisheries NZ Reporting Requirements.....	10
9. Animal Handling/Release and Crew Safety	11

Disclaimer: These OPs do not replace or override any fisheries legislation or other regulations including Health & Safety, Maritime Safety, Fisheries, Animal Welfare or the Wildlife Act. Vessel operators are required to ensure that both they and their crew understand all regulations that are relevant to the fisheries and environment that they are operating in, and that crew and vessel safety must always be considered.

MPI has stated that at-sea inspections will become more directed as a result of the availability of GPR data. Make sure you know what you need to meet legal requirements on protected species mitigation reporting. Please contact your Liaison Officer for support if you need assistance.

1. Background, Rationale and Purpose

The Coastal Setnet (SN) fishery operates overlapping with areas frequented by marine protected species such as seabirds and marine mammals and sharks. It is therefore important to use a structured approach to mitigate the risk of protected species captures. The protected species caught by the SN fleet are of significant importance to the community and some have very small and/or threatened populations. The Government will be responsive in ensuring that undue impacts are not occurring on protected species. It is in the best interests of the coastal SN fleet to take all reasonable steps to acknowledge, understand and reduce as much as possible impacts on protected wildlife encountered.

National Plan of Action - Seabirds and Risk Assessment

The National Plan of Action (NPOA) Seabirds focuses on education, partnering to find innovative solutions to bycatch mitigation, and ensuring that all fishers know how, and are taking all practicable steps, to avoid seabird bycatch. The NPOA sets out objectives for the next five years to guide management of risk to by-caught seabirds in New Zealand fisheries. This management comes mostly from Fisheries New Zealand (FNZ) with support from the Department of Conservation (DOC) and industry bodies such as Fisheries Inshore NZ (FINZ), Southern Inshore Fisheries Management Co. (SIFMC) and the DeepWater Group (DWG).

The New Zealand seabird risk assessment is the main way FNZ evaluates the impact of commercial fisheries on New Zealand seabirds. The assessment incorporates spatial overlap of seabird populations and fishing effort, as well as population size and productivity to determine each species' risk category. A key part of the NPOA Seabirds is the objective to decrease the number of fishing-related seabird mortalities and show a reduction in their risk ratios, so that populations can recover and stabilise. Currently 13 seabirds are assessed to be in a risk category that warrants prompt and considered attention. The seabirds relevant to coastal SN operations include penguins, shags, and petrels.

National Plan of Action - Sharks and Risk Assessment

Similarly to seabirds, NZ's shark species are included under a 'NPOA – Sharks' that documents NZ's planned actions for conservation and management of those species. Several sharks and rays are also protected under NZ legislation and some of those may be encountered when setnetting in your region.

Threat Management Plans – Hector's and Maui dolphins and NZ Sea Lion

NZ fur seals are occasionally caught in setnets. NZ Sealions have not been reported in setnets however are known to be vulnerable to setnets used overseas (e.g. Australia), therefore the risk of capture exists for both species as their numbers continue to increase around mainland NZ. Please see supplementary material for information on the Threat Management Plan for Maui and Hector's dolphins.

Purpose

These Operational Procedures (OP) have been established so that agreed and required management measures are clearly communicated to and understood by vessel skippers, managers and annual catch entitlement (ACE) providers/Licensed Fish Receivers (LFRs). This OP is relevant to vessels setnet fishing any species in South Island harbour, nearshore, and coastal regions.

This OP aligns with the 'Mitigation Standards to Reduce the Incidental Captures of Seabirds in New Zealand Commercial Fisheries (Toolbox of Measures)' developed by DOC and FNZ. The Mitigation Standards builds on existing statutory requirements to show bycatch mitigation options that are above and beyond minimum regulations. The fishing industry focuses on ensuring our fleets are meeting statutory requirements and encourages vessels to further reduce their risk of seabird captures, as appropriate to their vessel operations.

The purpose of the Coastal Setnet Operational Procedures is to ensure:

- The risk of seabird, marine mammal and protected shark species mortalities from the SN fishery is mitigated and protected species captures are reduced.
- All mandatory measures are understood and adhered to.
- Vessel skipper and crews are aware of additional, voluntary measures that go above and beyond statutory requirements.
- Vessels report as accurately as possible all capture events (FNZ reporting) as well as any Trigger Points required by the Seabird Liaison Programme.
- Vessel crews actively implement protected species mitigation measures i.e. **Look – Think – Act**
- Vessel skippers and crew are aware of systems to manage protected species risk and can stand up to audit or review by vessel owners, skippers or Government.

2. Main species at risk

Seabirds at Risk	Species Code	Main Risk Area	Threat Classification, Place, Time, Risk Profile
Australasian Gannet	XGT	All Areas	<ul style="list-style-type: none"> • <i>Not threatened</i> • Present year-round on entire NZ Coastline • Colonies at Cape Kidnappers, Muriwai Beach, Gannet Is (Kawhia), in the Firth of Thames, Coromandel, near Manukau Harbour, Outer Bay of Islands and White Island. • Strong plunge diving foragers
Fluttering Shearwater	XFT	All Areas, particularly ECNI	<ul style="list-style-type: none"> • <i>Relict (range has significantly reduced)</i> • Forage and rest in large numbers (i.e. thousands), pursuit divers • More commonly sighted inshore during winter • Colonies at Moturoa, Mokohinau Islands, Bream Bay, Hen & Chicks, Mercury and Alderman Islands and Little Barrier Islands.
Little Blue Penguin (Korora)	XLB	All Areas	<ul style="list-style-type: none"> • <i>At Risk - Declining</i> • Strongly impacted by adverse climate and oceanic events • Present year-round on entire NZ Coastline • Most frequently caught nearshore but may range up to 25km • Daylight forager, often rafts, return to land at night
Black, pied, little, and spotted shags	XPS (pied) XPP (spotted) XHG (black and little)	All Areas	<ul style="list-style-type: none"> • Pied Shag (<i>Nationally Vulnerable – Recovering</i>), solitary shallow water forager (<10m) in daylight hours • Spotted shag (<i>Not Threatened</i>), one of only two species of yellow-foot shags in NZ, caught near and offshore, solitary seabed foragers (down to 50 m) in daylight hours • Little Shag (<i>Not Threatened</i>), widespread in coastal and freshwater environments. Solitary shallow water forager. • Black Shag (<i>Naturally Uncommon</i>), Widespread across NZ, solitary forager in shallow murky water.
Unidentified petrel/shearwater	XXP	All Areas	<ul style="list-style-type: none"> • Occur across the range of fisheries • A variety of risk profiles for these species, which are impacted by other fisheries too • Black petrels (high risk seabird) breed in the Hauraki Gulf • Flesh-footed Shearwaters (high risk seabird) breed and forage near New Plymouth and ECNI

Marine Mammals / Sharks at Risk	Species Code	Main Risk Area	Threat Classification, Place, Time, Risk Profile
Maui dolphin	MDO	WCNI, particularly between Manganui Bluffs and Mokau	<ul style="list-style-type: none"> • <i>Critically Endangered</i> • Patchy distribution, often in shallow water and off river mouths but can extend range 20nm offshore • Not known to feed from nets, use sonar to detect prey, but not 100% of the time – making them susceptible to captures • WCNI: New closures in place as of June 2020: See supplemental material for maps
Hector's dolphin	HDO	ECSI, WCSI	<ul style="list-style-type: none"> • <i>Nationally Vulnerable</i> • Most abundant off the ECSI and WCSI but also found on the North Coast (Golden/Tasman Bay and Marlborough Sounds) and South Coast (Te Waewae Bay) • Patchy distribution, often in shallow water and off river mouths but can extend range 20nm offshore • Not known to feed from nets • Use sonar to detect prey, but not 100% of the time – making them susceptible to captures • NCSI, ECSI and SCSI: New closures in place as of June 2020. See supplemental material for maps. • WCSI: No commercial setnet closures in place.
Dusky Dolphin	DDO	All Areas, particularly EC	<ul style="list-style-type: none"> • <i>Not Threatened</i> • Found all around the coastline of New Zealand, but more so on the East Coast
Common Dolphin	CDO	All Areas	<ul style="list-style-type: none"> • <i>Not Threatened</i> • Commonly found in large groups offshore but also found year-round in some inshore areas
Bottlenose Dolphin	BDO	All Areas	<ul style="list-style-type: none"> • <i>Range Restricted</i> due to having three main coastal populations: Doubtful Sound, Marlborough Sound to Westport and Bay of Islands. However, are seen elsewhere along ECNI
Orca/Killer Whale	ORC	All Areas	<ul style="list-style-type: none"> • <i>Nationally Critical</i> • Present year-round on entire NZ Coastline • Typically in small family groups • Their numbers are small and believed to be declining
Southern Right Whale	SRW	ECNI	<ul style="list-style-type: none"> • <i>At Risk – Recovering</i> • Re-establishing around Mainland NZ, usually seen coastally (including harbours) in small numbers, mostly during winter but may be seen year-round.
NZ Fur Seal	FUR	All Areas	<ul style="list-style-type: none"> • <i>Not Threatened</i> • Present year-round on entire NZ Coastline, mainly rocky shores • Main NI Colonies in • Forage both nearshore and offshore (down to 200m deep)
Great White Shark	WPS	WCNI and ECNI, Kaipara Harbour,	<ul style="list-style-type: none"> • <i>Nationally Endangered</i> • Most common over summer, particularly Nov-Mar • Juveniles and females often off Northland coasts and WCNI (Kaipara Harbour) • Trans-Tasman population (range between NZ, Australia and the south Pacific Islands), highly migratory species

3. Managing the Main Risks Associated with the Coastal Setnet Fishery

It is recognised in New Zealand and globally that mitigating protected species interactions with setnets can be challenging, however there are options available to reduce risk. Coastal SN vessels must use a combination of mitigation practices to best address the risks of their individual operations. **Fishers are best placed to develop mitigation techniques, if you have innovative ideas about reducing the probability of protected species interactions contact your liaison officer.**

Risk Item	Ways to Manage Risk
<p>Food Attractant</p> <p>Discharging fish waste</p> <p>Species captured in the setnet during soak attracting protected species</p> <p>The longer the soak time, the higher the risk of captures</p>	<ul style="list-style-type: none"> Control (hold or batch) offal/waste discharge immediately before or during setting and hauling. If batching cannot occur, then discharge any attractant on the opposite side from which the hauling station is located. If hauling over the stern, discard offal/waste and live fish in batches on the leeward side of the vessel. Minimise net soak time. Use acoustic or other devices to deter the presence of at-risk marine mammal species near the gear (e.g. dolphin pingers).
<p>Setting</p> <p>Poor sink rate (the longer the net is on or near the surface) increases the risk</p>	<ul style="list-style-type: none"> Avoid discharging of fish waste immediately before or during setting. Ensure that the net is clean of any meshed fish or other potential food attractant when being set. Shoot the net at a lower vessel speed may achieve a faster sink rate. Avoid setting in the vicinity of known or observed seabird and marine mammal colonies/rookeries or known foraging areas. Avoid setting when large numbers of seabirds or marine mammals are present. While ensuring vessel & crew safety, reduce additional & unnecessary lighting on the vessel to a minimum.
<p>Hauling</p> <p>Predominantly entangled in the mesh</p>	<ul style="list-style-type: none"> Manage and minimise lofting of the net above the sea surface in high wind or wave conditions when seabirds and marine mammals are present. Ensure the vessel is moving at an appropriate speed to keep the net underwater while hauling. Use acoustic or other devices to deter the presence of at-risk species near the gear. Avoid hauling the net when large numbers of birds or mammals are present. While ensuring vessel & crew safety, reduce additional & unnecessary lighting on the vessel to a minimum.
<p>High Risk Periods and Areas</p> <p>Increased seabird numbers and aggressive feeding during breeding season, migration periods and/or moon periods</p>	<ul style="list-style-type: none"> Avoid known areas of high activity of protected species. Discuss these with your Liaison Officer so you are clear about where, what and when. Avoid setting gear near (where possible) rookeries, colonies and foraging areas (generally the closer you are the higher the risk) (see appendices for maps of areas to avoid). Avoid setting gear within any known consistent foraging or transit patterns of penguins (see appendices for maps of areas to avoid). While ensuring vessel & crew safety, reduce additional & unnecessary lighting on the vessel to a minimum (particularly while at anchor).

4. Mandatory Setnet Measures

MPI has implemented regulatory requirements for seabird risk mitigation. The regulations that apply are: *Fisheries (Commercial Fishing) Regulations 2001* - <https://www.legislation.govt.nz/regulation/public/2001/0253/latest/whole.html>

5a. North Island setnet closures for Hector's and Maui Dolphin

- **Additional SN closures came into effect on 1 October 2020, please refer to the MPI Dolphin TMP Fact Sheet in your folder for new measures introduced on the north, east and south coasts of the North Island.**

5b. Restrictions on setnets in channels

- Setnets must not extend more than one-quarter of the way across the width of a channel, river or stream (measured as distance between the bank of the channel, river, or stream, at right angles at that place at that time).
- Setnets must not extend more than one-quarter of the width of an arm of the sea, including an estuary, inlet, bay or sound (distance measured between a point on the water's edge and a point on the opposing water's edge that at the same point intersect with net, or a wing, leader or other item attached to the net).

5c. Length requirements for setnets

- Fishers must not use setnets if the total length of a net or combination of nets, whether attached together or otherwise is more than 1000m.
- However, if the upper edge of each net is more than 2m below the surface, the set net may be a maximum of 3000m in length or combination of total lengths whether attached together or otherwise.
- Fishers must not use or possess set nets with a total length of more than 500 m if, when the nets are set, they have part of their upper edge more than 2 m from the surface of the water – unless the nets have surface floats attached at intervals of 500 m or less.
- Fishers must not, in rivers, lakes, lagoons or estuaries, -
 - a) Use set nets or a combination of set nets if the total length of a net or a combination of nets, whether attached or otherwise, exceeds 1000 m, or
 - b) Set a set net within 60m of another set net.

5d. Soak time requirements for setnets

- Nets must not be left set in the water for more than 18 hours without underrunning the net and removing fish that have been caught.

5e. Stalling is prohibited

- Fishers must not set nets so that stalling occurs and must ensure stalling does not occur while the nets are set.

5f. Mesh size requirements for setnets

- Fishers must not use or possess nets whose mesh size is smaller than that specified in the table below, as per the regulations. Find mesh sizes for other species in the web page provided above.

Species of fish	Minimum net mesh size (mm)	Minimum fish length (cm)
Blue cod	-	33
Blue and Red moki	115	40
Butterfish	108	35
Elephant fish	150	-
Flatfishes (except sand flounder)	100	25
Red cod	100	25
Rig	150	-
Sand flounder	100	23
Tarakihi	100	25

5. Risk Management Plan Responsibilities

Responsibilities of Operator and Skipper

- Display a copy of the “Ten Golden Rules for Setnet Vessels” on the bridge.
- Ensure all crew are briefed on the Coastal SN OP and the vessel’s PSRMP and fully understand their responsibilities.
- Manage fishing operations in time and place based on their experience and the information provided in this OP to minimise overlap-with protected species.
- Be aware of protected species (seabird and marine mammal) activity around the vessel and in the area; assess risks and take actions needed to minimise risk.
- Ensure offal/fish waste is not discharged immediately before or during shooting, and if discharge during hauling is unavoidable, batch discharge from the side opposite the hauling station.
- Ensure correct reporting to FNZ and that trigger reports are sent promptly to your local Liaison Officer (see section 7).
- Ensure crew meet their responsibilities as listed below.
- Address any deficiencies in implementation of the PSRMP as noted by any observer
- Address the effectiveness and content of the PSRMP if seabird captures exceed the trigger points.

Responsibilities of Crew

- Manage offal and fish waste as outlined in this OP to reduce attraction of protected species to the vessel during times of shooting and hauling.
 - Haul the net as quickly as practicable and always seek to minimise the time the net remains at or near the surface.
 - Maintain a watch of seabird and marine mammal activity around the vessel and advise the skipper when there is risk that requires action, including:
 - Not shooting in presence of significant feeding activity.
 - Adjusting hauling speed and operation to reduce risk.
 - Advising if any animal is seen caught and ensuring its immediate release if alive.
 - Check and maintain any mitigation equipment (e.g. acoustic pingers).
-

6. Reporting Protected Species Captures - Trigger Limits

Trigger Limits & Vessel Action

Triggers Points include:

Any 24 hr period:

- (Alive or Dead) Any great albatross, penguin, dolphin, sea lion or basking shark
- (Alive or Dead) First turtle capture of fishing year
- (Alive or Dead) 3 large (e.g. albatross/mollymawk, giant petrel, gannet), or
- 5 small (e.g. petrel/shearwater) seabirds, or
- 2 fur seals
- (Dead) Any black petrel or flesh-footed shearwater

Any 7-day period:

- (Alive or Dead) 10 protected seabirds of any type, or 3 turtles, or 5 fur seals

Actions Required

Report all trigger points to your local Liaison Officer within 24 hours so that any follow-up can be discussed and carried out. Emails from Sat-C or texts are OK.

Your local Liaison Officer's contact details are on your Protected Species Risk Management Plan.

7. Audit & Review

Government fisheries observers on your vessel will audit the implementation of your PSRMP. **You own the plan, and it should reflect what you will do. Do not write anything into the PSRMP that you do not intend doing.** Information they collect will be provided to DOC, FNZ and the Liaison Officer.

If your PSRMP is not being implemented effectively, it means that either the Plan needs updating or practices onboard need to be improved. Your Liaison Officer can work this through with you and update your Plan if necessary.

Your PSRMP may also need updating at other times. For example, if you change gear or target species, or there are changes in any element of your fishing operations that relate to the risk of protected species captures. At these times, please contact your Liaison Officer.

8. Fisheries NZ Reporting Requirements

All protected species captures

It is not illegal to accidentally capture protected species while commercial fishing, but **it is illegal to fail to report the capture**. It is important that all captures and mortalities are reported accurately. All protected species (captures or deck strikes, see below) dead or alive (then returned to the sea) must be recorded on the Electronic Logbook.

Fisheries NZ observers may decide to keep some protected species caught for necropsy and identification. They are permitted to do so. The vessel may only do so if it holds a DOC permit.

Always meet your legal requirements.

Definitions:

- **Captures:** *An animal (dead or alive) which is brought onboard on/by the fishing gear and requires assistance/help off the vessel.*
- **Deck-Strikes:** *Birds that 'collide' with the vessel/deck/superstructure and are dead or injured and are unable to leave vessel of their own accord; report as 'deck-strikes'.*
- *Not reported if alive and leaves the vessel unassisted, (i.e. landed on vessel).*

NFPSCR Codes – Species ID and leg bands/tags

Seabirds

- If you are 100% sure, use the species individual codes supplied by FNZ and listed on pages 4 and 5 of this OP.
- **If you are not 100% sure of the species identification, take a photo and send it to your Liaison Officer who may help you identify the protected species.**
- If you still cannot ID the species you may use the **XPG** (unidentified penguin), **XHG** (unidentified shag), **XAL** (unidentified albatross/mollymawk) and **XXP** (unidentified petrels & shearwaters) species codes.
- Record any leg band numbers on the form, these are really important and FINZ urges skippers to record any leg bands.

Marine mammals

- If you are able to identify marine mammals, report these captures at the species level as outlined on pages 4 and 5 of this OP.
 - **If you are unsure, take photos of the head, whole body and any distinguishing marks on the marine mammal, do this without any crew or vessel features in the picture and send these photos with your Liaison Officer, who may help you identify the marine mammal.**
-

9. Animal Handling/Release and Crew Safety

Release Alive

Every care should be taken to release animals alive and in the best condition possible. Handle animals with care to minimise any further stress, harm or injury, and to increase its survivability back at sea. Refer to the [DOC Handling and Release Guide](#) for further diagrams and instructions. **Deliberately harassing or harming these animals after an incidental capture is an offence.**

Seabirds

- Keep the bird calm by covering the head with a cloth. Use two crew if possible; one to support the bird, while the other frees the gear from the bird. Use gloves and eye protection (some birds can inflict a nasty bite).
 - Carefully isolate the tangled meshes. Peeling the netting back over the tail, feet, and then the wings, while holding the bird firmly. Remove the head from meshes last.
 - Once freed, place the bird gently back into the water. If the bird is waterlogged keep it in a safe place, such as an empty fish case with a clean and dry towel lining the case floor. Cover the case also. Do not put the case in the wheelhouse as the bird will get too warm. Leave it on deck in the quietest location with the least draft possible, until it has recovered. Do not throw bird in the air, place back on water surface.
 - Refer to the [DOC Handling and Release Guide](#) for further diagrams and instructions.
-

Marine Mammals and Sharks

- If possible, remove animal from net without bringing aboard. This is especially important for sharks as their body structure does not protect their internal organs when hauled on deck or over rails.
- If possible, give seals time and space to leave the vessel. Do not take actions that will antagonise the animal and watch carefully for signs of aggression.
- Do not allow crew to be in the animal's path or escape route. Use netting as a moving barrier or a deck hose to persuade/guide the animal back to the sea.
- Seals can carry a number of diseases infectious to humans. Handling marine mammals should always be kept to a minimum and should only occur if absolutely needed.

When attending to animals landed on deck, the following steps should be followed to ensure crew safety:

- Whenever handling bodies of drowned fur seals, or any other marine mammals, wear waterproof gloves and waterproof protective clothing
 - Avoid direct contact with blood, urine, faeces and other body fluids. It is also important to avoid the mouth of the marine mammal as this is a major source of disease.
 - If bitten or grazed by a marine mammal, wash and disinfect the wound immediately, apply betadine/foban/antiseptic ointment and cover the wound. This minimises the risk of 'seal finger', a chronic and very painful infection caused by bacteria carried by some marine mammals. Visit a doctor once ashore as infection is very common with seal and sea lion bites.
 - After handling any marine mammal, crew should wash their hands and forearms with antibacterial soap and hose down their protective clothing.
 - Refer to the [DOC Handling and Release Guide](#) for further diagrams and instructions.
-

Returning Dead Protected Species to the Sea

The entire body of any dead protected species must be returned to the sea, unless a MPI observer onboard the vessel directs the skipper to keep it (or they themselves keep it) or the skipper has been advised otherwise by DOC or FNZ. Usually, they only keep seabirds, but may take parts of marine mammals or sharks.

Taking any part and keeping it or cutting or mutilating the body of a protected species is an offence.

Photo: Mike Bhana.

Conservation and management of New Zealand sharks

Over 113 species of sharks have been reported in New Zealand waters. Sharks are now known to be an important part of marine ecosystems and New Zealand's *National Plan of Action – Sharks* (available at www.mpi.govt.nz) recognises this.

SHARK FINNING BAN

From 1 October 2014, it is **ILLEGAL TO REMOVE THE FINS FROM A SHARK AND DISCARD THE BODY OF THE SHARK AT SEA**. The Fisheries (Commercial Fishing) Regulations 2001 require that any shark fins landed must be naturally attached to the body of the shark (see fact sheet 2).

The Regulations provide exceptions to the “fins attached” requirement for eight species of shark. These exceptions take two forms, the first is for blue shark and it allows the fins to be removed from the body but requires that the fins be attached to the trunk after processing (before landing). The second exception is for seven other QMS species, for which the fins may be landed separately but in accordance with a gazetted ratio (see fact sheet 3).

The management of individual shark species depends on Note that you are not required to land any fins.

Approach	Species	
Fins naturally attached	Spiny dogfish	SPD
	All non-QMS species	
Fins artificially attached	Blue shark	BWS
	Elephant fish	ELE
	Ghost shark	GSH
	Mako shark	MAK
	Pale ghost shark	GSP
	Porbeagle shark	POS
	Rig	SPO
	School shark	SCH
Ratio		

the scale of catch, as well as other factors such as how vulnerable they are to fishing. You are likely to come across the following categories –

• QUOTA MANAGEMENT SPECIES

- Blue shark BWS
- Elephant fish ELE
- Ghost shark GSH
- Mako shark MAK
- Pale ghost shark GSP
- Porbeagle shark POS
- Rig SPO
- School shark SCH
- Spiny dogfish SPD

Nine species of shark are managed under the Quota Management System (QMS). Catches of these species must be retained like any other QMS species, unless they are listed on Schedule 6 of the Fisheries Act 1996. A separate fact sheet is available explaining the conditions under which Schedule 6 applies and providing information on the appropriate recording of Schedule 6 releases (see fact sheet 4).

• NON-QUOTA SPECIES

The remainder of shark species are not managed under the QMS. Reporting obligations still apply for these species, but they do not have to be retained and landed.

You are encouraged to use best practice handling methods to release sharks alive wherever possible.

FOR MORE INFORMATION

Fact sheet 2 – Landing sharks with fins attached

Fact sheet 3 – Landing shark fins subject to a ratio

Fact sheet 4 – Requirements for returning sharks to the sea (Schedule 6)

A copy of the regulations is available at: <http://legislation.govt.nz>

The content of this Fact Sheet is information only. The requirements are set out in the Fisheries (Commercial Fishing) Regulations 2001 and the *Fisheries (Shark Fin to Greenweight Ratios) Circular 2014*. The Ministry for Primary Industries does not accept any responsibility or liability for any error of fact or opinion, nor any consequences of any decision based on this information.

Conservation and management of New Zealand sharks

- **PROTECTED SPECIES** – catches of these species both in the EEZ and on the high seas cannot be retained by law, but all catches must be reported on the “non-fish species or protected fish species catch reports”:

–Basking shark	BSK
–Great white shark (White pointer shark)	WPS
–Oceanic whitetip shark	OWS
–Deepwater nurse shark	ODO
–Whale shark	WSH

- **CITES-LISTED SPECIES NOT OTHERWISE PROTECTED:**

– Porbeagle shark	POS
– Smooth, scalloped and great hammerhead sharks	HHS
– Shortfin mako shark	MAK

Porbeagle, hammerhead, and more recently mako sharks have been listed in Appendix II of the Convention on International Trade in Endangered Species. Any landings from the high seas now require a “CITES introduction from the sea” permit before bringing any sharks into NZ fisheries waters. Exports of these sharks or their products now requires a “CITES export/re-export” permit.

Note that sharks caught in the New Zealand EEZ but not exported are not subject to CITES regulation. The CITES documentation process is administered by the Department of Conservation. For more information see <http://www.doc.govt.nz/cites>

Photo: Mike Bhana.

Landing sharks with fins attached

The Fisheries (Commercial Fishing) Regulations 2001 require that for all non-quota management system (QMS) species, spiny dogfish, and blue shark, any fins to be landed must be attached to the remainder of the shark.

Blue shark

If you are planning to land the fins of any blue shark they must be attached to the trunk of the shark.

If you are retaining blue shark fins, you may land the shark either green (whole) or as the principal product state of “**SHARK FINS ATTACHED**” (SFA). This state is described as the shark being processed to the dressed state (see Figure 1 over the page) and then the fins re-attached by some artificial means. This includes (but is not limited to) stitching them on, or storing both the dressed trunk and the fins in the same bag (one shark per bag).

This rule will allow the small fishery for blue shark meat to continue, by allowing processing at sea to maximise the value of the fish, but still allowing for retention of the fins.

Note that you are not required to land the fins; you may land a different principal product state of blue shark. It is only if you wish to retain the fins that you must land it in either the “**SHARK FINS ATTACHED**” state or green. You are allowed to return unwanted blue shark to the sea under Schedule 6 provisions (see fact sheet 4).

Spiny dogfish and all non-QMS species

For spiny dogfish and non-QMS species, any fins landed must be **naturally** attached to the remainder of the shark. This means that there must be some portion of uncut skin connecting the fins to the body. If you are retaining fins, you may land these sharks either as green (whole) or as the principal product state “**SHARK FINS ATTACHED**”. This is defined for spiny dogfish and all non-QMS species as the fish being processed to the headed and gutted state with the primary fins naturally attached (i.e. the pectoral fins, dorsal fins and some or all of the caudal (tail) fin).

You may cut the fins to allow them to be folded flat against the fish, or to allow for bleeding, but they must remain naturally attached to the trunk of the shark if they are being landed.

Note that this does not preclude landing another primary landed state. It is only if you wish to retain the fins that you must land it in the “**SHARK FINS ATTACHED**” state.

Non-QMS species can also be legally returned to the sea (dead or alive) if you don't wish to retain them (reported on disposal reports under disposal code “D”). Spiny dogfish can be returned (dead or alive) and reported on disposal reports under disposal code “M”.

FOR MORE INFORMATION

Fact sheet 1 – Conservation and management of New Zealand sharks

Fact sheet 3 – Landing shark fins subject to a ratio

Fact sheet 4 – Requirements for returning sharks to the sea (Schedule 6)

A copy of the regulations is available at: <http://legislation.govt.nz>

The content of this Fact Sheet is information only. The requirements are set out in the Fisheries (Commercial Fishing) Regulations 2001 and the *Fisheries (Shark Fin to Greenweight Ratios) Circular 2014*. The Ministry for Primary Industries does not accept any responsibility or liability for any error of fact or opinion, nor any consequences of any decision based on this information.

FIGURE 1: BLUE SHARK (BWS) DRESSED (DRE)

The body of a fish from which the head, gut and fins have been removed with:

1) the anterior cut being a straight line passing immediately behind the posterior insertions of both pectoral fins.

(The posterior insertion of the pectoral fin means the point along the body of a fish at which the rear (posterior) edge of the pectoral fin emerges.)

2) the forward angle of the anterior cut not less than 90 degrees in relation to the longitudinal axis of the fish.

3) no part of the tail cut forward of the posterior base of the anal fin.

4) the belly-flap may be removed by a cut, no part of which is dorsal to the cartilaginous backbone.

Photo: Mike Bhana.

Landing shark fins subject to a ratio

3

The Fisheries (Commercial Fishing) Regulations 2001 prohibit shark finning and require that any shark fins landed must be naturally attached to the remainder of the shark (or artificially in the case of blue shark). However, an exception to the fins attached requirement is provided for seven QMS species to allow at-sea processing to continue.

These seven QMS species are:

- Elephant fish ELE
- Ghost shark GSH
- Mako shark MAK
- Pale ghost shark GSP
- Porbeagle shark POS
- Rig SPO
- School shark SCH

For these species, the weight of all fins landed must not exceed a specified percentage of the greenweight of the shark. For example, if the ratio for a particular species is set at 3.5, if sharks are landed that have a total greenweight of 100 kgs, the fins of that species landed cannot weigh more than 3.5 kgs. They may weigh less than that. The ratios will be applied to landings on a trip-by-trip basis.

The species which may have fins landed separately, the specific ratios for each species, and the "primary fins" which have been used to set the ratios are defined in a *Shark Circular* which can be found at: www.mpi.govt.nz

Note that landing other fins may result in being over the gazetted ratio for a species.

How will the ratio work?

For species where you normally process the catch at sea and keep both a trunk (for example, dressed) and also

the fins, not a lot should change, but you will need to **STORE AND LAND THE FINS SEPARATELY BY SPECIES**. Fins must be landed wet. This will be a legal requirement from 1 October 2014, and will allow monitoring to make sure you are not retaining any more shark fins than the trunks they come from.

Future reviews of ratios will be based on direct sampling over the coming years.

For the main inshore shark species, the ratios have been set so that if you follow normal processing practices, you shouldn't exceed the ratio with your landings of shark fins. The ratios for each species have been set based on statistical analysis of at-sea sampling data. However, you will need to monitor your landings more closely so you can be confident you aren't exceeding the weight ratio, especially as you become familiar with the new rules.

FOR MAKO AND PORBEAGLE, there are some differences in cut and which of the fins are retained across different fleets. **THE RATIO IS SET BASED ON RETAINING THE WHOLE TAIL (CAUDAL) FIN**. This has been done to try and avoid any accidental non-compliance (which could occur if the ratio was set lower), but you will still

need to monitor your landings more closely to ensure you don't exceed it, especially if your vessel normally lands the whole tail. You can choose to land just the lower tail lobe. Close monitoring will occur to make sure no high-grading is occurring within the ratio.

Over the next two years, there will be ongoing monitoring and continued data collection to ensure that the ratios are set appropriately. Monitoring and enforcement will differentiate between slight variation around the ratios, which is to be expected, and a consistent trend of too many shark fins compared to shark bodies.

It is your responsibility to ensure you are within the ratio, but if you think the ratio is set incorrectly for a particular species, talk with MPI and/or a commercial stakeholder organisation such as Fisheries Inshore.

If you land any fins, you will need to report the actual weight of the fins for each species in the appropriate part of landing reports.

Retaining the fins from one shark and the trunk from a different shark (high grading) is an offence under the shark finning regulations.

Requirements for returning sharks to the sea (Schedule 6)

Schedule 6 of the Fisheries Act 1996 sets out QMS species that may be returned to the sea, so long as the specified conditions are met.

As part of the regulatory package to ban shark finning, MPI has made changes to Schedule 6 for several species of shark to allow them to be returned to the water. This provides a legal option for fishers who accidentally catch a shark for which they have no market.

In many cases, the best option is to try and avoid catching the sharks altogether if they are not marketable species. There may be different ways to avoid shark catches, depending on the species and the fishery. Some research is currently being done for surface longline fisheries.

Schedule 6 returns to the sea provide another option if you have already caught the shark. This fact sheet has been produced to explain the Schedule 6 provisions for shark species and detail the associated reporting requirements.

Live release only

The following species of sharks may only be returned to the sea **ALIVE**, if they are **LIKELY TO SURVIVE** and returned as soon as practicable:

- Rig SPO
- School shark SCH

Any returns of these species must be reported on disposal reports under disposal code "X" and will not be counted against your Annual Catch Entitlement (ACE).

Live or dead – pelagic sharks

For the following species:

- Mako shark MAK
- Porbeagle shark POS
- Blue shark BWS

Sharks may be returned to the sea **ALIVE**, if they are **LIKELY TO SURVIVE** and returned as soon as practicable. Any sharks returned to the sea **ALIVE** must be reported on disposal reports under disposal code "X" and will not be counted against ACE.

As of 1 October 2014, these sharks may also be returned to the sea if they are **DEAD** or **UNLIKELY TO SURVIVE** provided they are correctly reported. Any sharks returned to the sea dead or unlikely to survive must be reported on disposal reports under disposal code "Z". These returns will be counted against ACE. You need to accurately estimate the weight of the sharks discarded this way.

Live or dead – spiny dogfish

Spiny dogfish may be returned to the sea either live or dead. There is no differentiation between live and dead fish. Any spiny dogfish returned to the sea must be reported on disposal reports under disposal code "M" and will be counted against ACE.

Seabird Bycatch Mitigation Standards Guide

Set net

What Are Seabird Bycatch Mitigation Standards?

August 2021

The seabird bycatch Mitigation Standards were developed alongside the NPOA Seabirds 2020. They document the 'best practice' mitigation methods for reducing the risk of seabird captures in New Zealand commercial fisheries. It is expected that by 2025 the majority of vessels will have a Protected Species Risk Management Plan (PSRMP) that is tailored to their operational needs and works towards achieving the best bycatch mitigation options available.

These Mitigation Standards do not replace or override any fisheries regulations, or legislation on workplace health and safety, maritime safety, or other relevant subject.

Legal Requirements

1. Set net vessels must meet all regulations pertaining to size of mesh, the maximum soak times, maximum lengths and net prohibition areas and restrictions.
2. Commercial fishers must ensure that stalling does not occur while the nets are set.

'Best Practice' Mitigation Methods

1. **Control the discharge of fish waste**
 - No discharging of fish waste immediately before or during setting.
 - During hauling, either hold or batch discharge fish waste at intervals of no less than 30 minutes.
 - During hauling, retain all used bait on board until hauling has finished.
 - Return live fish (meeting legal requirements) to the sea as soon as practicable.
 - Document a plan for fish waste discharge should there be any equipment failures. Keep a copy on board.
 - Whilst still allowing the free movement and egress of water, maintain a secondary system that prevents uncontrolled fish waste discharge (*i.e.* equipment to minimise fish waste lost to factory floor or deck, grating and/or trap systems in fish sorting and gutting areas that lead overboard).
2. **Minimise any risk due to the spatial placement of set nets**
 - Nets are not set in the vicinity of known or observed bird colonies or foraging areas (consider time of year).
 - Nets are not set in an area when there is high bird activity, such as feeding/diving. Avoid fishing in known areas where seabirds have recently been caught.
3. **Minimise any attractions or access to the set net itself**
 - All practicable stickers are removed from the net before each shot.
 - Minimise the time the net is at or near the surface of the water. Shoot and haul as quickly as practicable.
 - Ensure net is set in a way that does not risk stalling.
 - Regularly inspect and maintain gear and equipment to reduce the risk of gear failure.
 - Where possible, conduct maintenance during periods of low risk to seabirds and with the net on board.
4. **Minimise deck landings or vessel impacts by seabirds**
 - Keep additional and unnecessary deck lighting to a minimum so as not to attract or disorientate seabirds, especially while sheltering or at anchor.
 - Keep gear and deck clean of any remaining fish waste where possible.
 - Ensure crew are familiar with safe seabird handling procedures (see [DOC Handling and Release Guide](#)).

For More Information

Contact your Liaison Officer for any questions you may have. They will be working with you to try and achieve these Mitigation Standards. The full document is available on the [MPI website](#).

Managing artificial lights to reduce seabird vessel strikes

Aotearoa New Zealand is the seabird capital of the world. Our seabirds are taonga (treasures) and our long coastline is dotted with their colonies. Unfortunately, many of our seabirds are threatened with extinction, so managing threats, including light pollution, is critical to their survival.

Why is light management important?

Many seabirds get disorientated by artificial lights at night, which can lead to collisions with vessels (vessel strikes). Following vessel strikes, seabirds can be contaminated with chemicals on deck (eg oil or fuel), causing loss of waterproofing and subsequent drowning. Vessel strikes can also cause direct seabird deaths. The risk of vessel strike is highest during foggy and rainy nights.

What can you do to help seabirds?

We recommend taking the following actions, while maintaining vessel and crew safety.

- Minimise light use, especially spotlights and floodlights, when you are within 5 km of an offshore island, where most seabird colonies are located.
- Avoid unnecessary movements and activities at night.
- Eliminate unnecessary lights.
- Shield lights to only light areas essential for safe operations.
- Use lights with reduced or filtered blue and violet wavelengths (eg 2200 K).
- Use black-out blinds wherever possible.
- Practice safe seabird handling and release techniques when vessel strikes occur (see diagrams below).
- Record and report vessel strikes.

Commercial fishers

- Follow your Protected Species Risk Management Plan and operational procedures.
- Contact your liaison officer for more information.

Shearwaters and petrels (including diving petrels, storm petrels and prions) are particularly susceptible to vessel strikes. *Photos: Oscar Thomas*

Protected Species Information for Commercial Fishers

Tākoketai/Black Petrel

Where are black petrels?

Breeding location: Tākoketai/Black petrel breed only in New Zealand. There are two remaining breeding colonies found in the Hauraki Gulf on Aotea/Great Barrier Island and Te-Hauturu-o-Toi/Little Barrier Island.

Breeding time: Tākoketai/Black petrel breed from October through to June each year. When they are not breeding, they migrate to South American waters to forage and feed.

Foraging distribution: Tākoketai/Black petrels forage and feed in the entire inshore area of the East Coast of the North Island from Mahia to Kaitaia. Their distribution is focused on deeper water near the continental shelf, with concentrations found closer to Great Barrier Island where they breed. Offshore they extend and are found on the East and West of the North Island.

How to recognise black petrels

Tākoketai/Black petrels are black or very dark brown, with black feet. The bill is pale yellow with a black tip and a distinctive double tube nostril on top.

Distribution Map:

The distribution map shows where Tākoketai/black petrels are more likely to be found during the breeding season and where bycatch has occurred.

The dark blue areas indicate where numbers are most concentrated (hot spots) for foraging and feeding. These areas are also where most captures have been reported.

This data was accumulated from 1997 to 2019 breeding seasons.

It is not illegal to capture seabirds. IT IS ILLEGAL not to report captures of seabirds.

Protected Species Information for Commercial Fishers

Toanui/Flesh-footed Shearwater

Where are flesh-footed shearwaters?

Breeding location: Toanui/Flesh-footed shearwaters breed on islands off the coast of north of New Zealand and in the Marlborough Sounds, Australia, and on St Pauls Island in the Indian Ocean. Mauima/Lady Alice Island, Northland Ohinai Island, Coromandel and Titi Island, Marlborough also carry large colonies.

Breeding time: Toanui/Flesh footed-shearwaters breed from September to May. When they are not breeding, they migrate to the Northern Hemisphere to forage around Japan, India, and North America.

Foraging distribution: Toanui/Flesh-footed shearwaters forage and feed in the entire inshore area of the North Island and the upper South island, with concentrations found closer to where they breed. Offshore they extend and are found on the East and West of the North Island. They are active at the day and night during their breeding season, with most feeding occurring during the day.

How to recognise flesh-footed shearwaters

Toanui/Flesh-footed shearwaters are approximately 45cm long and are dark brown. They have a light pink coloured bill and white-flesh coloured legs and feet.

Distribution Map:

The distribution map shows where flesh-footed shearwaters are more likely to be found during the breeding season and where bycatch has occurred.

The dark blue areas indicate where numbers are most concentrated (hot spots) for foraging and feeding. These areas are also where most captures have been reported.

This data was accumulated from 1997 to 2019 breeding seasons.

It is not illegal to capture seabirds. IT IS ILLEGAL not to report captures of seabirds.

Shags

XPP - Spotted shag

Slender grey with long slender brown bill and green facial skin

*yellow/orange feet

XPS - Pied Shag

Black above and white below, long pale bill with pink base, yellow spot by eye and dark underwings

*black feet

XHG Unsure/Other – Shags

XSI - Unknown Otago/Foveaux Shag

XSO - Otago Shag

Large, have pied and bronze phases and orange caruncles during breeding season

*pink feet

XFO - Foveaux Shag

Large, have pied and bronze phases and no orange caruncles

*pink feet

*black, yellow or pink feet

ACOUSTIC PINGERS FOR SETNET FISHING GEAR

Acoustic deterrents, or 'pingers', alert dolphins to the presence of fishing nets. The following are two examples of acoustic pingers readily available in the Australasian market. For more product information and to assess the best option for your fishing operation contact the relevant distributor.

Porpoise & dolphin deterrent pinger (50-120kHz)

For use globally. **Seal safe.**

Battery life	12 months with average use (50% immersion time)
Frequency	50kHz – 120kHz with harmonics
Advanced acoustics	randomised pings with harmonics, prohibits habituation
Transmits outside the audible range of seals (Source).	
Dimensions	185mm x 52mm x 42mm
Weight (with battery)	229 grams
Space the pinger every 200m	
Sound level	145dB +/- 3dB @ 1m
Compliant with	European legislation: EC 812/2004

Porpoise deterrent pinger (10kHz)

For use globally

Battery life	12 months with average use (50% immersion time)
Frequency	10kHz with harmonics
Dimensions	185mm x 52mm x 42mm
Weight (with battery)	229 grams
Space the pinger every 100m	
Sound level	132dB +/- 3dB @ 1m
Compliant with	European legislation: EC 812/2004
Compliant with	NMFS Harbour Porpoise Take Reduction Plan
Compliant with	NMFS Pacific Offshore Cetacean Take Reduction Plan

Dolphin Anti-Depredation Pinger (40kHz)

Frequency –	40kHz
Battery Life –	175 hours
Dimensions –	185mm x 52mm x 42mm
Weight (with battery) –	229 grams
Space the pinger	every 75-100m
Sound level	175dB +/- 3dB @ 1m

Anti-Depredation Pinger 70kHz

- Stop Dolphins taking your fish!
- Reduce expensive damage to your gear caused by Dolphin attacks.
- Over 1000 times louder than 132 decibel Pingers.

Set Net Vessel: Observer PSRMP Audit

Trip Number	Observer Code	Vessel Name		Trip start date	Trip end date
Target Species		FMA's fished		Number of sets	
Name of Skipper(s)					

Record Yes (Y), No (N), Not Applicable (N/A) or Unknown (U) in the boxes provided. If you answer N or U to any questions, please make detailed comments on the reverse.

- Item 1 Did the vessel carry a copy of the appropriate Operational Procedures and 10 Golden Rules on board that was made available upon request?
- Item 2 Was a copy of the vessel's Protected Species Risk Management Plan (PSRMP) readily available and in a place accessible to all crew?
- Item 3 Were the skipper and crew familiar with the contents of the:
 - (a) Operational Procedures?
 - (b) 10 Golden Rules?
 - (c) Protected Species Risk Management Plan?
- Item 4 Were any protected species capture trigger points reached during the trip? *(If yes, please describe in the comments)*
- Item 5 After a trigger point was reached, did the crew: *(If yes, please describe in the comments)*
 - (a) Make changes to fishing operations?
 - (b) Change the mitigation measures they implemented?
- Item 6 Did a gear or equipment failure contribute to the risk of protected species captures during the trip? *(If yes, please describe in the comments)*
- Item 7 Were all protected species captures reported on the Non-Fish Protected Species Catch Return as required by fisheries reporting regulations?
- Item 8 Were protected species that were caught alive, handled and released according to the DOC Handling and Release Guide?

Fish waste management

- Item 9 Was all fish waste/offal discharge managed as per the vessel's PSRMP?
- Item 10 Was all fish waste held on board immediately before and during setting?
- Item 11 During hauling, was fish waste/offal held or batch discharged at intervals opposite to the side the vessel was hauling?

Placement

- Item 12 Did the skipper demonstrate awareness of high-risk areas in deciding where to fish? (i.e; away from seabird colonies and foraging grounds) *(If yes, please describe in the comments)*

Net interaction

- Item 13 Was the net kept at the surface for an unexpected or unnecessary amount of time? *(If yes, please describe in the comments)*
- Item 14 Was the net cleared of all practicable stickers prior to shooting?

Deck landing/impact

- Item 15 Were all lighting practices managed in a way that avoids attracting or disorienting seabirds?

Please make a detailed comment for each item when required.

Hector's and Māui dolphins Threat Management Plan

North Island fisheries measures

Below is a summary of the new fisheries measures to support the Threat Management Plan for Hector's and Māui dolphins, which come into effect on **1 October 2020**.

Hector's and Māui dolphins are only found in New Zealand waters and together are one of the world's rarest dolphin species.

Extensive measures are already in place to reduce fishing-related threats to Hector's and Māui dolphins and more is needed to be done to protect them.

The Government is extending and creating new areas that will prohibit the use of commercial and recreational set-nets in both the North Island and South Island.

While trawl fishing poses a lower risk of fishing-related mortality, given the critically endangered status of the Māui dolphin, the Government is also extending the trawl prohibition within the central Māui dolphin habitat zone.

What does this mean for the North Island?

The west coast North Island, from Cape Reinga down to Wellington, will see new measures introduced.

- New commercial and recreational set-net closures out to 4 nautical miles offshore will be created between Cape Reinga and Maunganui Bluff, and between Hawera and Wellington.
- Set-net closures will be extended between Maunganui Bluff and the Waiwhakaiho River (New Plymouth) from 7 nautical miles to 12 nautical miles offshore, as well as between the Waiwhakaiho River and Hawera from 2 nautical miles to 7 nautical miles offshore.
- Set-net closures within the Manukau Harbour will be extended to Taumatarea Point in the north and Matakawau Point in the south within the harbour.
- An extension to commercial trawl closures between Maunganui Bluff and Pariokariwa Point will be put in place, extending south to the Waiwhakaiho River (New Plymouth) and to 4 nautical miles offshore. This falls within the central Māui dolphin habitat zone.
- Commercial and recreational drift netting will be banned in its entirety in all New Zealand waters.
- A change to the regulations allows the Minister to act immediately to impose further restrictions if a single dolphin is caught in the Māui dolphin habitat within the west coast of the North Island.

How do the measures affect commercial fishers?

The measures will prevent commercial set-net fishing in the areas outlined above, extend closures to trawl fishing in the central Māui dolphin habitat zone, and prohibit drift netting in all New Zealand waters. These changes are significant to fishers who operate between Maunganui Bluff and Hawera, given the scale of the offshore extensions. However, the measures will also be notable in the Northland, Manawatu-Whanganui, and Wellington (Kapiti) regions where there are currently few or no commercial restrictions on the use of set-net.

An additional new measure will enable the use of commercial ring nets in set-net prohibition areas within west coast North Island harbours; this fishing method poses a low risk to Māui dolphins.

Other commercial fishing methods including drag netting and beach seining may continue to be used unless otherwise prohibited.

Fisheries New Zealand

Tini a Tangaroa

Will the new measures impact customary fishing?

Tangata whenua may still authorise customary fishing to be carried out by non-commercial or commercial fishers, with or without a fishing vessel, using any type of gear or method.

What do the measures mean for recreational fishers?

Recreational fishers will no longer be able to fish using set-nets in the areas outlined above, or drift net in any New Zealand waters. The set-net changes will be notable in the Northland, Manawatu-Whanganui, and Wellington (Kapiti) regions where there are currently few or no restrictions on the use of set-net.

Other recreational fishing methods including drag netting and beach seining may continue to be used unless otherwise prohibited.

What does this look like in your area?
