

Figure 5: Lower crown regeneration on left is typical of the healthy condition 1 category. The contracting old crown represents condition 3.

Figure 6: Severely contracted crown of a condition 4 tree although more commonly a greater proportion of dead fine branches were present.

Figure 7: Typical open canopy forest with black maire dieback taken from track near site C.

Headwaters of Hurupi Stream as viewed from the southern traverse D

Figure 9: Heavy puriri moth attack on a 40cm DBH stem.
