

Figure 8

Forest remnant at Earthquake Slip Conservation Area, December 1998. Above: canopy of karaka (*Corynocarpus laevigatus*) and titoki (*Alectryon excelsus*), shredded by possums and wind. Below: karaka seedlings on the ground, nibbled off by goats as they attempt to provide sorely-needed regeneration.

Figure 2

Sensitive indicators of possum and deer presence at Makahu Saddle, Eastern Kaweka Forest Park, December 1998.

Left: mountain fivefinger (*Pseudopanax colensoi*) adult. Below: haumakaroa (*Pseudopanax simplex*) seedling.
